

Habitat Modeling – *Combining Factors*

Average Habitat Suitability

-  1 - 3: optimal
-  3 - 5: suboptimal but used
-  5 - 7: occasionally used
-  7 - 10: strongly avoided

Habitat Modeling – *Review*

- Select **habitat factors** that comprehensively explain your focal species habitat preferences
- **Weight** relative influence of habitat factors
- Score relative importance of **classes within factors**
- Determine how your species is related to factors, and select **arithmetic** or **geometric** algorithm accordingly
